

r08 — dual-branch 3-class VAE

v2.conv_noattn_dualbranch_cls · z=8, base=32 · 769 k params · runs/vae/r08-run-0004

Note — the latent grid pitch is 4 voxels (100 μm), but a cell is not a 4^3 block: one cell's receptive field is 22^3 voxels (550 μm), it writes back over 22^3 voxels, and $6^3 = 216$ cells reach every output voxel.
